Theme of Session:

Soft computing is a collection of methodologies, which aim to exploit tolerance for imprecision, uncertainty and partial truth to achieve tractability, robustness and low cost solution. The objective of the special session on “Application of Soft Computing and Intelligent System in Engineering (ASCISE)” is to discuss about the recent developments and trends in the area of Soft Computing and Intelligent Systems. We invite academicians, researchers from all disciplines of engineering and industry experts to contribute papers based on emerging techniques in the broad areas of Soft Computing. It also provides a platform for researchers and practitioners to discuss the applications of Soft Computing to Control problems, sensor fusion, manufacturing, testing and diagnostics, semiconductor processing, modeling of complex systems, approximate reasoning, optimization, decision analysis, information systems, forecasting, reliability, cost-benefit analysis, risk assessments, medical applications, forensic applications, automotive applications, robotics, automation, etc.
